

CANADA'S FINEST STOVES

WOOD CATALOGUE 2020

MADE IN CANADA, FOR CANADIAN WINTERS

CANADA'S FINEST STOVES

Pacific Energy extends the following warranty coverage to the original registered purchaser of the product:

10 Year Coverage

10 year coverage is extended to the following components (parts only) porcelain finish, glass (glass for thermal breakage only, not impact), plating, firebox and baffle.

3 Year Comprehensive

Pacific Energy will replace or repair any part found to be defective (parts and labor) for three years from the date of purchase.

This coverage includes electrical components (fans, speed controls and thermal switches).

INDUSTRY LEADING TECHNOLOGIES

1 SINGLE LEVER AIR CONTROL

It's never been simpler to achieve a clean, efficient flame. With Pacific Energy systems, a single, easy-to-operate air control lever can regulate the entire burn.

2 BAFFLE SYSTEM

Pacific Energy is a recognised industry leader in "clean burn" technology, as exemplified in our unique high capacity baffle system for preheating secondary combustion air for re-burning. By burning the combustible elements in the air, we improve our heaters environmental performance while significantly reducing the amount of wood that is consumed.

The design and construction of our baffles is second to none: these removable hollow chambers are precisely formed and perforated to allow a continuous, controlled flow of secondary air—with no moving parts. Constructed from fully seam welded 304 grade, non-ferrous stainless steel they ensure efficient combustion of secondary air throughout the entire burn cycle. Like every component in a Pacific Energy wood heater, they are guaranteed to perform for a lifetime.

3 EBT EXTENDED BURN TECHNOLOGY

Our second-generation Extended Burn Technology, or EBT2, precisely regulates secondary airflow based on vacuum created by the chimney for a longer, cleaner, more economical burn. This automatically adjusts the secondary combustion system, for a cleaner, more efficient burn and extended burn time.

CAST IRON OVER STEEL

Until we pioneered the Alderlea line, and its revolutionary iron-wrapped steel firebox, a cast iron firebox was just that: cast iron. The Alderlea design makes the most of each metal: the floating steel firebox is free to expand and contract, and its design maximizes convective heat efficiency, while the cast iron wrapping provides radiant heat. This superior system greatly extends longevity over an all cast firebox. Metal fatigue is no longer a factor, allowing us to offer the industry's first lifetime warranty on a cast wood heater.

This technical innovation lives "under the skin" of the Alderlea line, which maintains the beloved traditional wood heater appearance. We say it's "powered by design, and crafted by tradition".

4 SELF SEALING ASH DUMP

Our self-sealing ash dump, with its spring-loaded door provides a time saving, hassle-free ash removal solution that, frankly, has yet to be equaled. Serious wood burners utilise ash removal systems. Many stoves simply have a removable cover over their ash removal opening inside the firebox. Pacific Energy's machined steel, spring loaded ash removal system is opened from outside the heater and closes automatically for safety and convenience when you're done.

5 AIR WASH A SYSTEM BY PACIFIC ENERGY

Soot-covered fireplace glass? Not likely with Pacific Energy heaters. Over 30 years ago, we pioneered the use of glass doors on free standing wood heaters. We followed that with the first effective airwash manifold system, a design that flows preheated air to the glass surface to keep it clean.

Over the years we have continued to refine our airwash design: it now creates a high-pressure zone in the center and forces air to flow from above and across the glass. Even at low air settings, we are confident that our airwash system is the most effective available. And that our glass doors are among the cleanest in the industry.

6 KNIFE EDGE DOOR

A formed and welded knife edge opening creates a superior air tight seal to the door while strengthening the heater face. This is a more labor intensive design but our experience has proven this is the best way to manufacture a fireplace.

OUTSIDE AIR

High efficient homes with double glazed windows and 5+ stars are extremely air tight, so much so that when even an exhaust fan is turned on your home can become negative pressured.

Negative house pressure is a common problem that can cause fireplaces and wood-burning appliances to smoke. This is probably the least understood house issue, but one that usually can be easily corrected.

Pacific Energy has an optional fresh air intake kit making it easy to run a duct outside for fresh air into your wood heater. Adding a fresh air intake is highly recommended for any new home or for homes with people who might be sensitive to particles in the air.

Pacific Energy wood heaters have a designated inlet that allows you to run a duct to outside to bring fresh air in for your fire.

If you have your heater installed on an external wall, the duct can go straight out the back. If you have your heater installed on an internal wall, you can run the duct inside the wall cavity, through the roof to outside.

STEEL RANGE WOOD

VISTA - SUPER - SUMMIT

FEATURES

Reliable catalytic-free technology
Multi-port Combustion Air; creates unique enhanced flame
Airwash Technology; for clear, clean glass
Single-Lever Air Control; one touch control
Fully firebrick lined; enhanced thermal mass
Heavy plate steel top; cooking capable

NEO 1.6

| | |
|--------------------|------------------------------|
| Heat Output | 200–230 m² |
| Efficiency ★★★★★★ | 75% |
| Emissions ★★★★★★ | 0.7 gm/kg |
| Burn Time | 7–12 hours |
| Log Size (max) | 40–45 cm |
| Weight | 154 kg |

The NEO 1.6 freestanding makes a bold statement with its tall profile for easy loading, line-of-sight view of the flame, and modern design. Like its larger cousin the NEO 2.5, the NEO 1.6 is a true heating machine with Pacific Energy's solid steel construction, floating firebox with stainless steel baffle and high-efficiency finned heat exchanger. Choose the color that is right for your home with side panels available in a variety of colors.

NEO 2.5

| | |
|--------------------|------------------------------|
| Heat Output | 280–300 m² |
| Efficiency ★★★★★★ | 82% |
| Emissions ★★★★★★ | 1.0 gm/kg |
| Burn Time | 7–12 hours |
| Log Size (max) | 45 cm |
| Weight | 208 kg |

NEO 2.5 offers elegant, modern lines and a large firebox for high heat output. With no-stoop loading, large glass door, and simple air control, the NEO 2.5 is a practical wood heater with Pacific Energy's clean-burning technology that reduces emissions while maximizing burn time and efficiency. It includes all the features and convenience of the NEO 1.6, including optional side panels in a variety of dramatic colors, and the ability to use the top as a cook stove. Installation is simplified with leveling legs for uneven surfaces.
